

# Let's Start Fresh

*Boxes are made from the highest available content of recycled material and are chain-of-custody certified.*

*No Tape! A proprietary pad and re-usable clips eliminate the need for tape.*

*Storage clips are returned for reuse or recycling.*

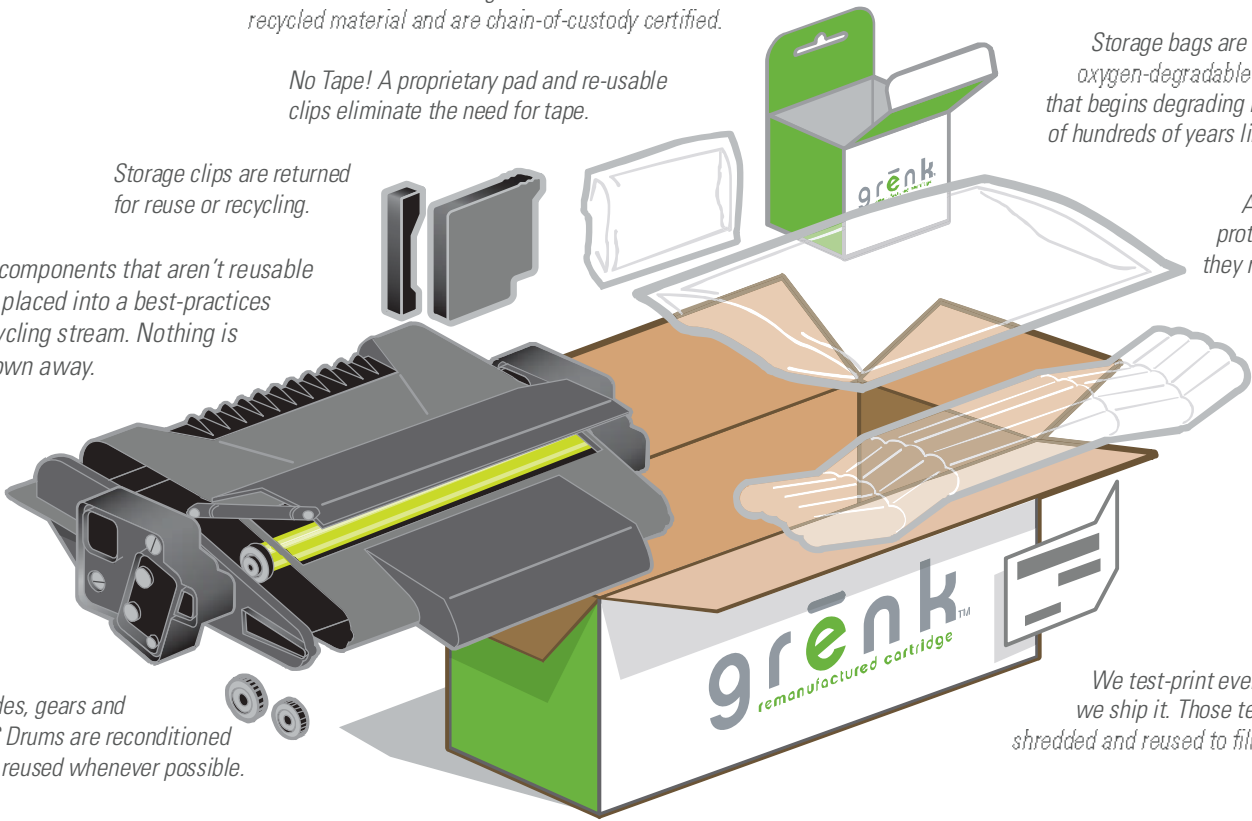

*All components that aren't reusable are placed into a best-practices recycling stream. Nothing is thrown away.*

*Storage bags are made from a new oxygen-degradable polyethylene film that begins degrading in months instead of hundreds of years like standard bags.*

*Air Pillows not only protect our cartridges, they reduce the amount of plastic we use.*

*Blades, gears and OPC Drums are reconditioned and reused whenever possible.*

*We test-print every cartridge before we ship it. Those test sheets are then shredded and reused to fill the storage bags.*

It's one thing to recycle a print cartridge. InkCycle's been doing that since 1992. But with greñk, we recycled the entire process, finding new ways to make our cartridges – and our entire business – more eco-friendly and sustainable.
